IXΛYΛ

Corporate

Brochure

Introduction

Ixaya is a research and technological development company with highly trained professionals in both areas, generating cutting-edge technologies for the growing needs for optimization of global industries.

For more than 13 years, we have developed high-level software, generating solutions and achieving certification and recognition by prestigious banking and corporate entities, thus realizing safe and effective banking. The pragmatic working methodology that we have in Ixaya allows us to present, in a clear and simple manner, all the process from the initial proposal to the development and implementation. Ixaya works under the Lean Six Sigma methodology and has Black Belt level certified staff.

Ixaya recognizes that has in its hands the responsability and opportunity to be an agent of change, so we have the Carbon Neutral certification, that means we counteract one hundred percent of our carbon dioxide (CO_2) emissions into the atmosphere.

Through our BBB^{SM} (*Better Business Bureau*) Certification we confirm to our customer the commitment we have to provide the best products and services ensuring our response to any disagreements that may arise.

In Ixaya we have a set of tools, consultants and expert analysts in a number of areas of information technology, which allow us to offer consulting and technical support to deal with any eventuality.

Mission

Our mission is to establish ourselves as leaders in research and comprehensive development in the field of information technology, thus providing freedom through innovation.

Vision

By 2020, manage to be the best and largest provider of information technology for the automotive and aerospace industry in Mexico, recognized for our quality of service and innovation.

Maxims

Protect the customer's privacy

One of our main priorities is always to protect and manage the personal data of our clients in an appropriate manner, thus assuring their confidence and tranquility.

Always give more than agreed

We have a constant commitment to exceed contractual expectations with our customers, which is why we provide follow-up and support to guarantee your complete satisfaction.

Always speak with the truth

At Ixaya, we are fully aware of the importance of transparency, both to our staff and to our customers. Honesty is the best policy.

Unique and simple things

We are convinced that any unnecessary complexity should be avoided, that is why we seek to maintain simplicity in our developments and in our processes.

Services

As a research and development company, Ixaya focuses on high availability and user experience. In this way, we are able to offer multiple services for our clients, developing cutting-edge solutions, precision and sophistication.

B2C Applications

Business-to-Consumer applications that help your company to expose its products and services to a wide range of consumers. We develop from banking applications and tax payments to chatbots for your project. Whether you have a cafeteria or want to sell art online, we can develop an application tailored to your needs.

B2B Software

Business-to-Business software developed to optimize and streamline your operations, from acquisitions and contracts to blockchain solutions, electronic data interchange (EDI), electronic invoicing according to the dispositions of each country or region and asset tracking. We can develop software that solves a specific problem in your business.

Manufacturing software

We create specialized software capable of extracting data from automatic production lines, making traceability for tracking components and helping factories to recognize the origin and destination of each component in its assembly line. Even if it is not a Lean process, we can create a solution that helps improve your productivity and performance.

Consultancy

We can help your IT department to know the real level of implementation of their information systems. In the same way, we can help you audit your company in detail and provide the necessary assistance and advice to fill any gap in your team, both in infrastructure and in operation.

Analysis

We can analyze your current solutions and help you gain a better understanding of their internal functioning. We are fully qualified to reverse engineer undocumented or precompiled software from your legacy systems, and even project a new solution to replace those old systems.

ERP

Solutions for business resource planning, as well as software implementation and development. You can focus more on the differentiation of your business without the need to fall into micromanagement. From SAP® or Microsoft Dynamics® to Odoo®, it does not matter if it's proprietary software or open source, we have the solution that best suits your business.

Artificial Intelligence

Artificial Intelligence Type I and Type II, which integrates from the management and entertainment of chatbots to advanced machine learning processes. We have created applications with the ability to respond in a timely and correct manner to human requests with compliance responses, such as products, specific weather information and more.

Big Data

Store all your business data and information about that data to get the most out of and capitalize on that knowledge. We have developed advanced solutions that archive, filter and analyze information from processes as diverse as manufacturing, equipment linked to the Internet of Things (IoT), and traffic to websites and mobile applications.

Business Intelligence

We have the tools to examine and inspect complex data and convert it into useful information. From local databases or simple spreadsheets, we can develop advanced solutions that extract convenient and extremely valuable information in real time to support you in the decision-making process of your business.

Web Services and APIs

We develop web services and APIs to exchange information between different processes, libraries and applications according to defined protocols and standards. Integrate in your web page functionalities of beginning of session and publication through social networks, information of location to show specific contents, notifications, information of climate and much more.

yoPago

yoPago is a secure and certified solution that simplifies the online collection process from a mobile device using the most convenient acquirer: citibanaex, Banorte Payworks, Banorte Payworks + 3D Secure, Conekta.io and Authorize.Net. Integrate our payment engine with your website through the API. Forget the complicated requirements of banks and start receiving payments now.

E-commerce

We have the ability to transform any website to incorporate fully secure and effective electronic commerce solutions. Increase your sales and maximize your profits, allowing your customers to acquire your products or services 24 hours a day, 365 days a year without the limitations associated with physical spaces.

Blockchain Solutions

The blockchain technology represents an authentic revolution in the way in which records are made, offering the most reliable and secure option thanks to the cryptographic techniques that give rise to it. Clinical histories, transactions, digital identity checks and much more. Any process that requires a reliable registry can be developed through the blockchain.

Trading Systems

We are able to develop trading systems that follow a set of rules to define the way of operating one or several financial instruments in order to obtain benefits. Thanks to the current financial technology, it is possible to create automated investment strategies that allow users to maximize their profits.

Credit Card Tokenization

Card tokenization technology adds greater security to your online transactions by intercepting the numbers of credit cards entered in any payment receiving system and replacing those numbers with a substitute value or token, in order to prevent the data Non-encrypted reals are stored in e commerce sites or third party ERPs and CRMs.

Automation of Financial Arbitrage

We develop systems and applications that allow you to take advantage of price differences between different markets by facilitating transactions to capitalize the price imbalance, thus achieving instant utilities with a very low risk. Use technology in your favor in transactions of financial instruments and be a participant in the global economy.

Launching of ICOs and ERC20

An ICO (Initial Coin Offering) is a crowdfunding for projects based on the blockchain to sell tokens in exchange for cryptocurrencies. These tokens, regulated under the technical standard ERC20, constitute a new cryptocurrency and users who have invested are the first to have them. We have the technology to carry out these launches.

Web Scraping

Web scraping is a technology for collecting large volumes of data, automatically, from a multitude of web pages. Get relevant information for you and your business by simplifying the exhaustive processes of investigation and data capture when executing these tasks in only a fraction of the time it would take a human to perform them.

IXAYA NET

We offer a complete service of domain registration and web hosting tailored to your needs to make your projects come true.

Hosting

We offer three different solutions tailored to your needs: basic hosting, unlimited and configurable hosting. Storage and monthly transfer according to the requirements of your project, administrative panel, unlimited email accounts, Apache web server, SQLite databases, PostgreSQL and MySQL, access via FTP, SFTP and SSH, as well as support for various frameworks.

VPS

We offer you the flexibility and scalability to obtain the best performance that only a VPS can provide. All the space and power of a virtual private server to be used only by you. We also have a special option for resellers whose customers require web hosting. In addition, we can preconfigure Odoo, Pentaho or Windows in your VPS.

Domains

Having a good domain is essential to have an online presence because it is the name we show to others. We can help you to find the right one for your site thanks to our wide selection of extensions, including .com, .com.mx, .mx, .net, .org and many more. Check in our website for the availability of the name you want and buy it before anyone else.

If you have any questions, our support team is always ready to assist you cordially, either by phone, through our chat, from our Facebook page, by opening a ticket from our portal http://ixaya.net, or contacting us via email.

Protect your online privacy and guarantee your peace of mind with our specialized services.

SPAM EXPERTS®
SIMPLY SPAM FREE

Inbound email filter

Intelligent filter for incoming emails with advanced technology that prevents the passage of spam, viruses and malware. It has an extensive API for integration and automation, and is compatible with any mail server and with the most common control panels.

Have full control over the blocking and administration of users, extensions and email size restrictions. Determine black and white lists of senders and recipients, domains and email aliases, reports and more.

Outbound email filter

Intelligent filter for outgoing emails with advanced technology that prevents the passage of spam, viruses and malware. Extensive API for integration and automation, 100% compatible with any mail server and can be integrated with the most common control panels.

Traffic encrypted by SSL/TLS, automatic blocking and scalable user-based quarantines. Advanced white, black and gray list management tools. Filtering reports and log searching possibility.

Email archiving

You don't have to worry about the loss of sensitive information in your company anymore. Protect the email accounts you want against any kind of deletion, whether accidental or provoked, with the security provided by the SpamExperts cloud.

The emails are archived in a compressed and encrypted format that makes easy retrieval possible. Your messages will continue to be saved even when your primary email server is down.

SSL Certificates

Provide confidence and tranquility to the users of your website through an SSL certificate, encrypting the data so that it can travel safely under the highest standards, indispensable in electronic commerce sites and those that handle sensitive information.

We offer this service through various providers of digital certificates, such as GeoTrust®, Symantec™ and Comodo®, with different options according to the needs and scope of your website.

CLOUDFLARE®

CloudFlare is a content delivery network service that works as a reverse proxy between the user of your website and the server, temporarily storing static site content to reduce the number of requests while allowing access to your visitors.

Extra layer of protection against SQL injection attacks, cross-site command execution, DDoS attacks and more. Streamline your web applications by reducing load times thanks to our wide range of functions.

ClearOS

ClearOS is an operating system platform that runs on dedicated hardware or in a virtual environment. It offers robust server services, management of local network infrastructure, generation of VPNs to allow your employees remote access to your office network.

Gateway, load balancing, port mapping, private cloud, real-time reports of the state of the network, among many other things. ClearOS is the most complete and adaptable solution tailored to your needs.

Our working methodology

This process guarantees the satisfaction of both the customer and the end user. We detail our workflow below.

We listen to you

The first stage is to listen to the customer. Talk to our professionals and discuss your needs, requirements and scope.

Outline process

When we are aware of your requirements we can begin with planning on paper. Then we can sit down and talk with you again. This is the optimal stage to make changes and suggestions.

Formal proposal

Afterwards we will present to you a formal project proposal, considering everything that was agreed upon at the second stage. From this step, your idea begins to become a reality.

Development

Once the formal proposal has been approved, it is the right time to start with this stage. Our development team is responsible for designing and programming the application that you have requested.

Feedback

During the development stage we will contact you to schedule periodical reviews and show you the progress of your project. We want to hear your opinions to adjust details and comply, in a timely manner, with the agreed delivery date.

Final product

The penultimate stage consists in showing to you your finished project. We will explain the details of the application and perform a demonstration for you.

Implementation

Now you are ready to begin! We only have to do one final on-site demonstration in real time. This is how we guarantee your and your customers satisfaction.

Software Development

Turnkey applications integration

A collection of mobile solutions developed by us for seamless integration with business and commercial processes.

Custom application development

We develop mobile applications tailored to your specific needs, for different platforms, mainly **iOS®**. Furthermore, we have the assistance service in the approval processes of entities like **Apple® AppStore™**, banking and certifying institutions.

For this purpose, in Ixaya we apply Agile working methodologies, which enable us to deliver results quickly and make iterations as projects evolve during development stage.

SOME APPS DEVELOPED BY US

quick! food & more

Application for store and restaurant management

Ziiggig

Online shopping application that incorporates artificial intelligence

CHABELO El zapato de los niños

Application for sales agent appointment management

Products

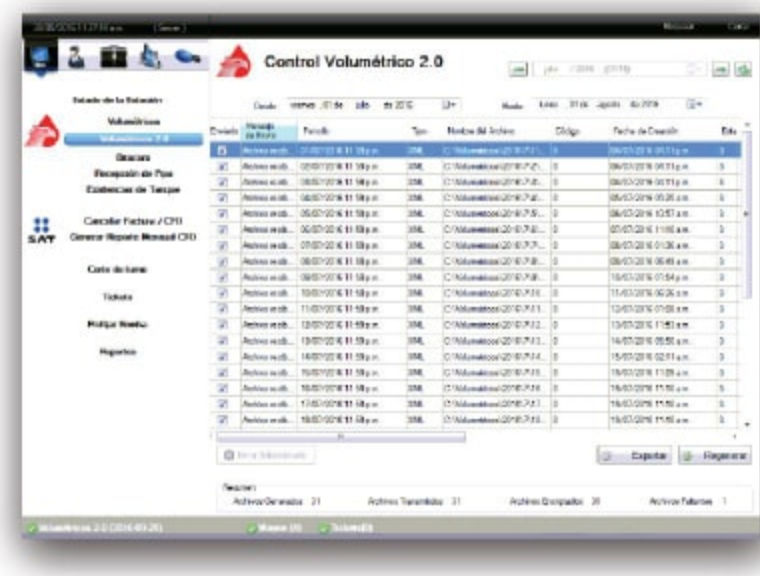

These are some of the immediate solutions we have for your company or business.

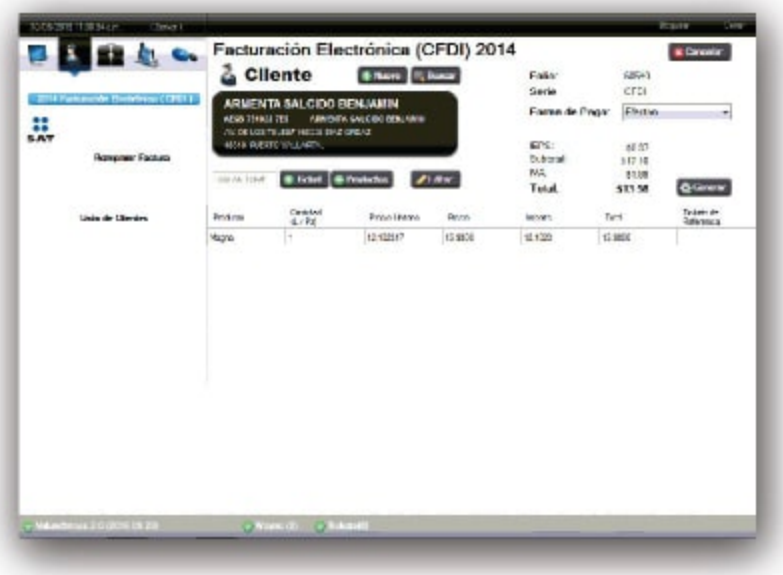

Citygas

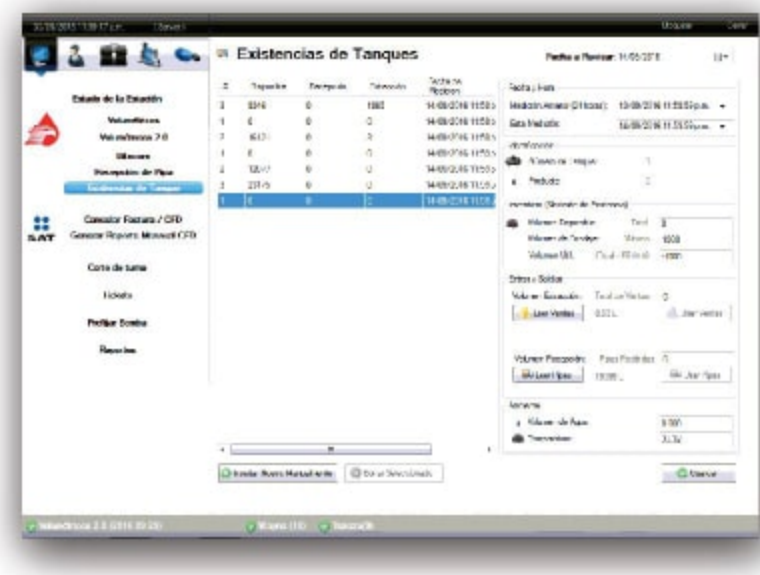

Gas station management system

Citygas is a specialized management system for volumetric control and monitoring of gas stations, including preset pump control and dispatching of fuel, monitoring of tanks and alarms, ticket printing, updated sending module of volumetric data with Internet connection detection capability that allows to keep up to date your submissions despite having intermittency or failures in your connection by your ISP, integrated electronic invoicing, user system with configurable permissions, payroll control, electronic stamping, as well as product price control. Citygas allows you to have all your data organized and centralized in a single system. It also has a centralized management portal for companies that extend credit for fuel consumption.

La Caja

Point of sale application

The friendly interface of La Caja allows to quickly collect payments, shortening operation time to provide an increase in sales. With the integration of CFDI to the system, we are offering a practical and reliable solution. It incorporates features for controlling employee shifts. It can be used for any kind of commercial establishment.

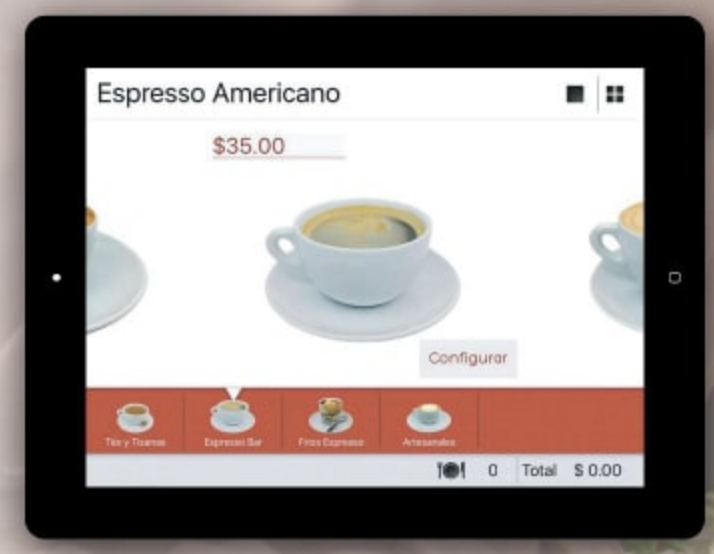

Cook & Serve

The ultimate suite for your restaurant.

La Carta

Restaurant ordering application

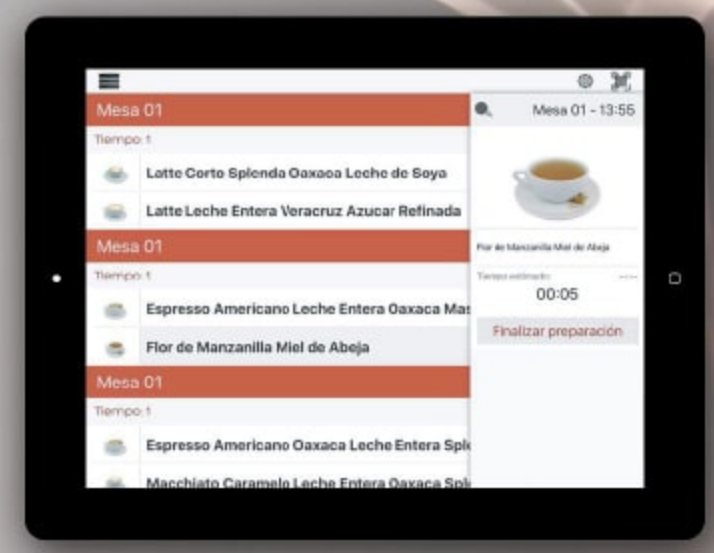

The catalog manager feature of La Carta allows multiple sublevels to handle product groups. This way you can configure quickly and easily any promotion, like chef's recommendations or seasonal foods. Any modification to the catalogs is automatically synchronized with the system, thus ensuring immediate response without complicated processes.

La Cocina

Kitchen management application

Once the customers have made their order, the application is responsible for sending the instructions to the kitchen staff to begin production in the fastest, agile and flawless way: what the customer asks for is what the customer gets. It has staff control features.

atenda

Mobile application for event management that offers flexibility, practicality and convenience for organizers and guests.

Atenda can be fully customized to your event, adopting its colors and including the screens and functions that are necessary, such as ticket printing and seat selection. On the main screen you will find the description of the event and you can link to your website and social networks.

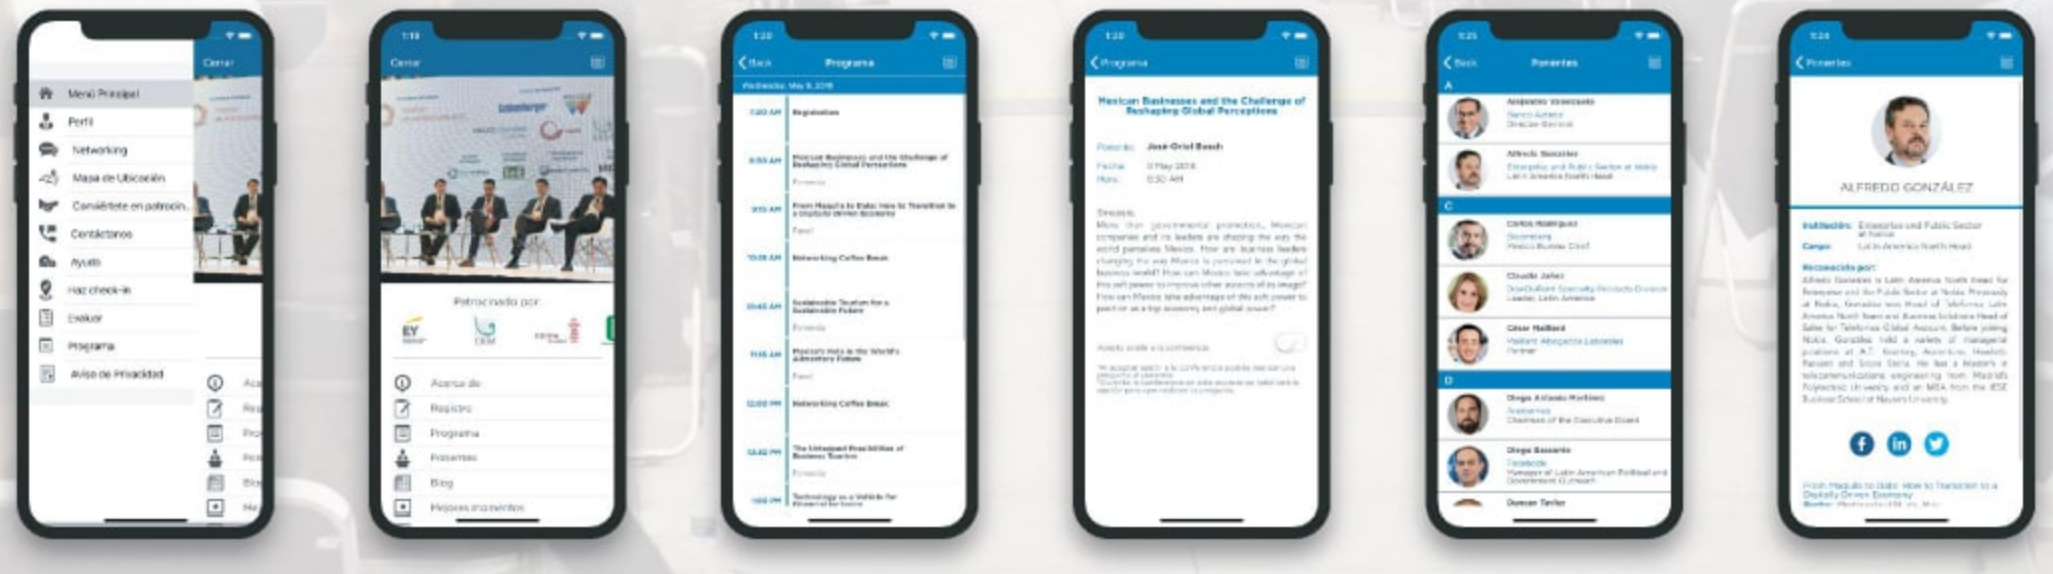

There is a section for attendees to register and, if necessary, pay the corresponding fee for admission. Once inside, the user can upload their profile picture and update the data that will be shown to the other attendees. The speakers are listed in alphabetical order, by sector or by company.

From this list, the user can view the profile of the speaker and navigate to the conference or panel in which he / she will participate to confirm attendance. From here you can register questions for the speaker.

The networking function allows attendees to interact with each other and with the speakers in a private way. There is a section to include a location map and evaluate the quality and organization of the event.

Additionally, we guarantee the confidentiality of your data and those of your users as they are hosted on our secure servers. Atenda is available for iOS and Android platforms.

- Event
- Speakers
- Registration
- Login and profile
- Calendar
- Networking
- Evaluation
- Event map
- Ticket printing
- Seat selection
- Security

These are some of our clients who use Atenda for their events.

MEXICO BUSINESS EVENTS

High level conferences in which business and political leaders meet to analyze the key issues that define Mexico's economic future, accelerating the exchange of vital information in the industry, crucial to capitalize the country's economic potential.

EL BOSQUE MEXICO CHAMPIONSHIP

Unique event in Mexico from the web.com Tour that serves as an entry for professional players to the PGA Tour. 157 players from 20 countries come to the tournament every year and compete to win important prizes as well as valuable points that allow them to advance in their career.

AGUA HACKATON

Event organized by Centro Fox and CONAGUA to promote entrepreneurial culture among young people of the Bajío region and provide them with tools that allow them to generate proposals for the conservation and use of water in different spheres of life.

FORO GO2

National business forum, focused on the foreign trade of Guanajuato, which brings together more than 900 CEOs of companies with Foreign Trade operations, executives of export areas, officials and professionals in related topics.

US-MEXICO CHAMBER OF COMMERCE

The US-Mexico Chamber of Commerce develops different events, training and strategic communication networks through which its members can expand their corporate image and reach new foreign markets.

CITEK FORUM

National and international networking event in which leading experts in the areas of energy, information technology, the automotive industry and innovation meet to discuss relevant issues that affect our world today.

GLOBAL TRUE NORTH: WORLD FORUM

Global platform to share ideas, knowledge, experiences and success stories through forums, congresses, events and training, working with experts from different disciplines and linking CEOs of global disruptive companies with high social impact enterprises.

ENTIX

Event that links technology companies with other sectors, to be able to harness and take advantage of the benefits of innovation and technological advances, thus promoting Mexico's economic development by creating effective businesses and prosperity.

HACKATON SUSTENTABILIDAD

Event organized by Centro Fox to promote entrepreneurial culture among young people throughout the republic and provide them with tools that allow them to generate proposals for the conservation and use of natural resources in today's society.

B2B & Industrial Solutions

Automatic Data Collection and Traceability

Wireless, mobile, voice and data collection solutions custom-designed to meet your requirements.

RFgen has mobility solutions for companies, that offer validated connectivity towards a multitude of ERP systems, like: SAP®, SAP Business One®, Oracle® JD EdwardsTM, InforTM MAPICS, Oracle® E-Business SuiteTM, Deltek® Costpoint, Microsoft® Dynamics™ and many more.

RFgen seamlessly connects to your existing ERP environment and enables voice directed operations like selection, put-away, replenishment and so on, to be generated from your ERP system and transmitted wirelessly to any Vocollect mobile computer appliance or compatible device.

RFgen provides mobile data collection and automated supply chain solutions for:

- Asset management
- Barcode labeling
- Field service management
- Inventory management
- Remote warehouse management
- Warehouse automation
- Voice Picking

Thus, RFgen translates work assignments into voice commands that can guide employees towards a specific hallway or section and then store that location.

Providing actionable data in real time to your employees no matter where they are is no easy task. RFgen makes it easier to capture any transaction in real time from the point of activity. You may quickly develop applications that support connected and disconnected operations for smartphones, tablets, desktops, barcode scanners, voice devices, and more.

ERP — Enterprise Resource Planner

We specialize in implementing business management systems, having certified SAP and Microsoft Dynamics ™ consultants.

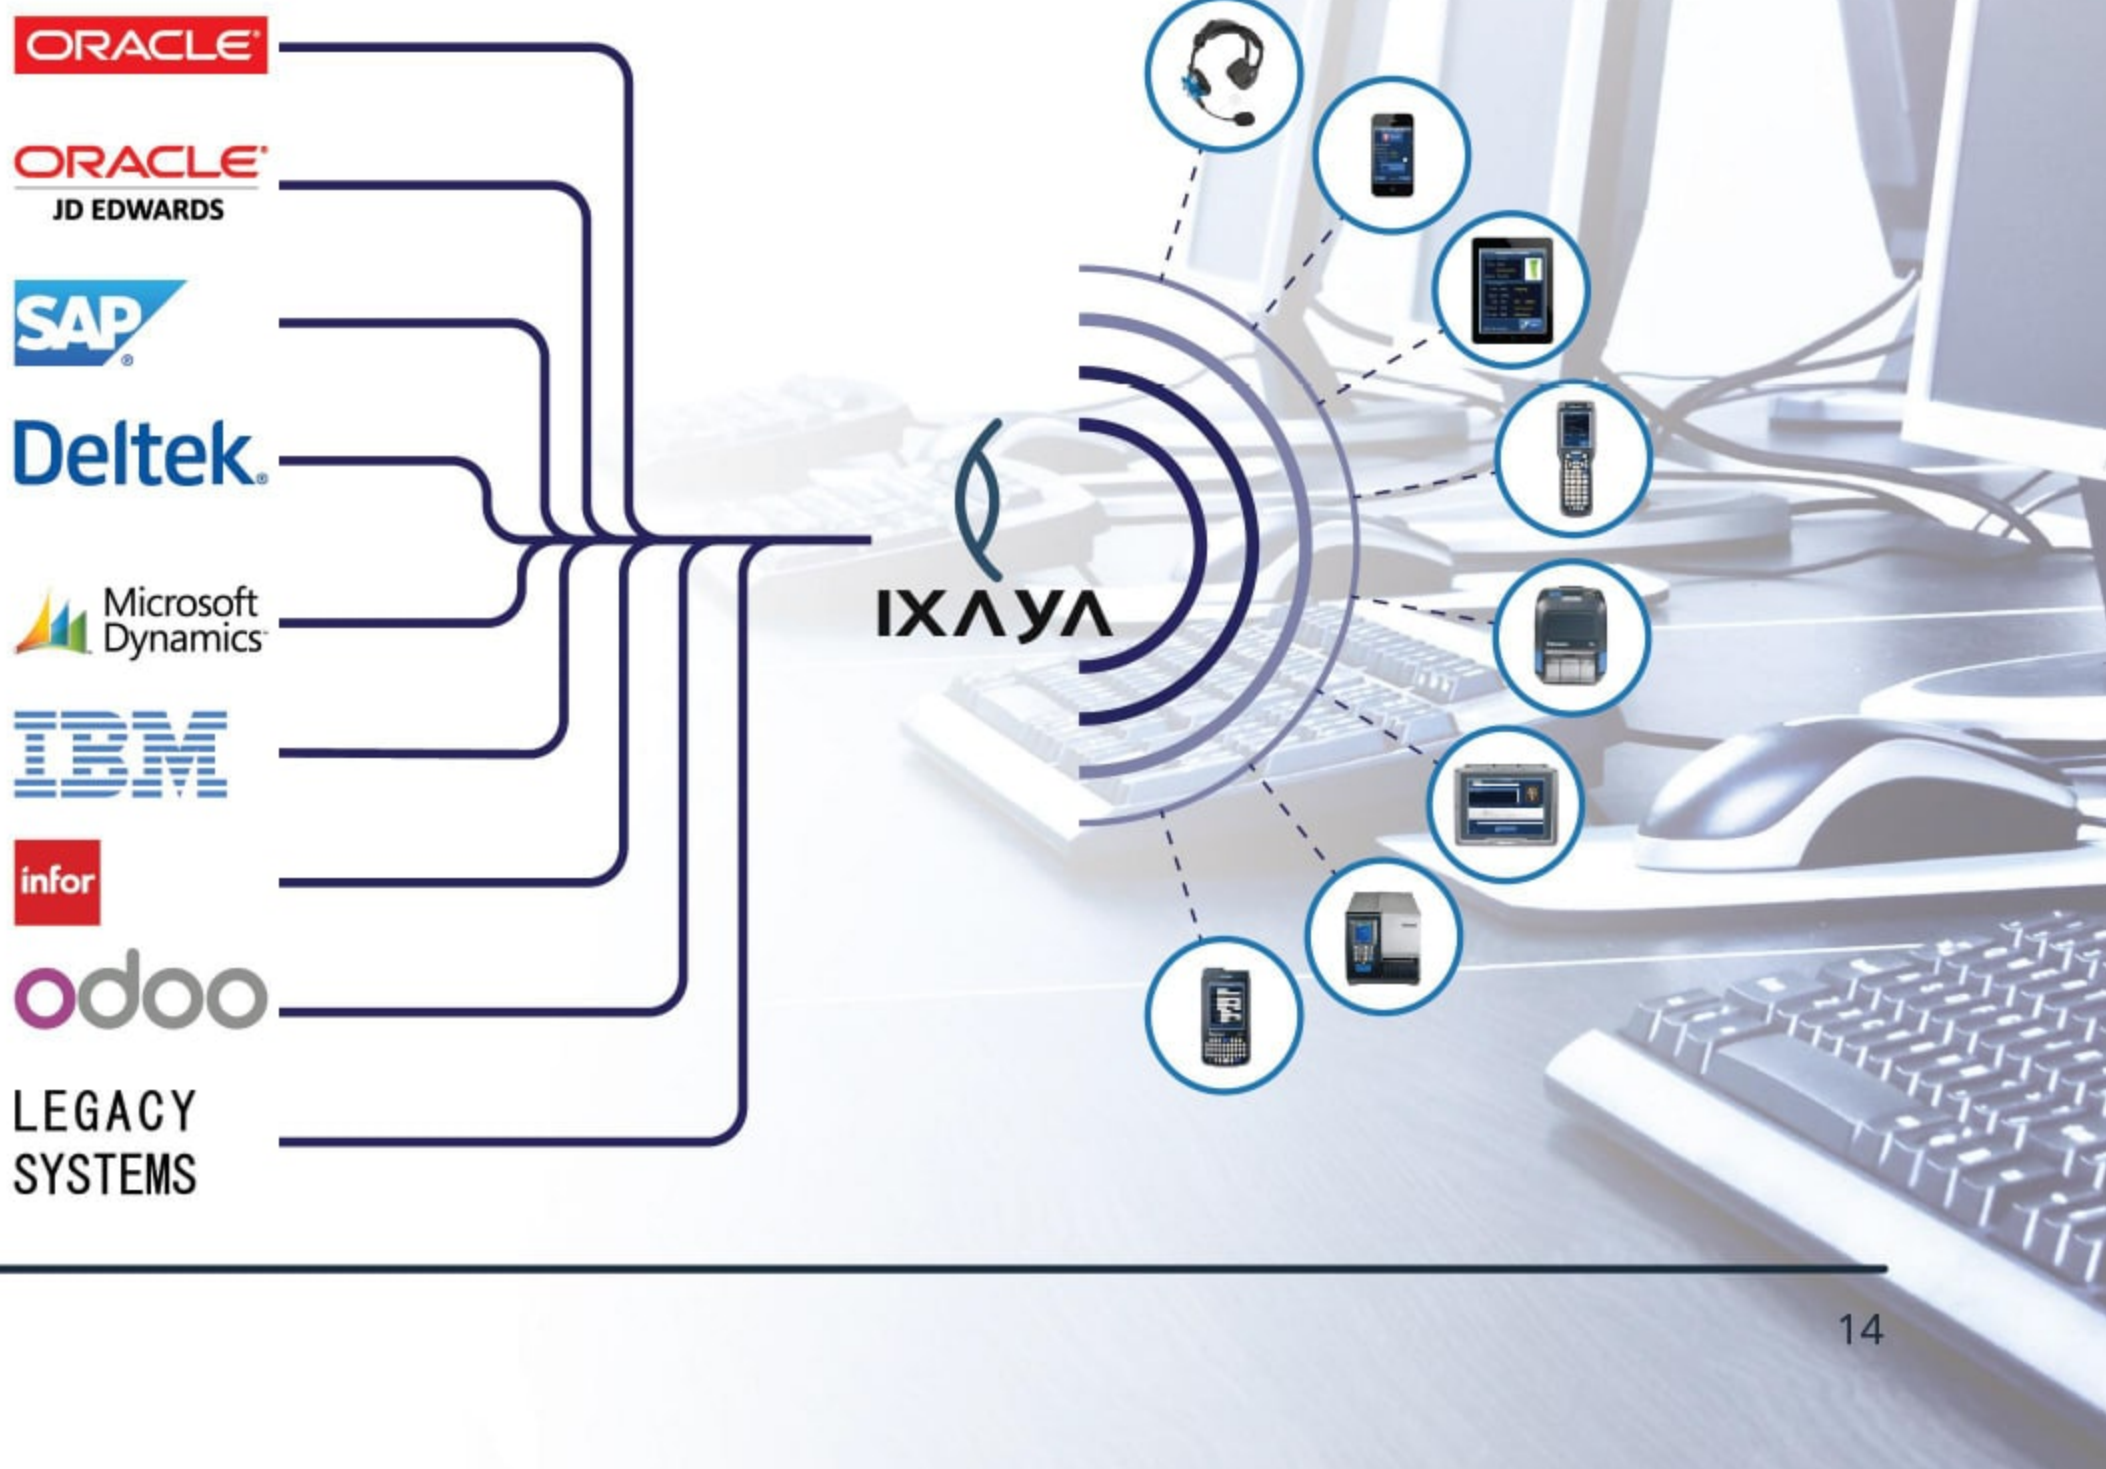

Ixaya provides working tools that allow organizations to focus more on the company than the resources, so our proposal is to implement free and open source elements that are cross-platform, such as Odoo, with connectivity to other similar products, thus increasing the administration and management capabilities of your company.

To enhance the implementation of open source systems, we have developers focused in making the necessary adjustments to the system that will meet the specific needs of your organization and thus achieve your projected growth expectations.

Odoo is an integrated open source ERP system, designed as an alternative to SAP and Microsoft Dynamics®.

SAP® Business Suite is a set of programs that allow businesses to run and optimize various aspects, such as sales systems, finance, banking, purchasing, manufacturing, inventory and customer relations.

Microsoft® Dynamics™ AX is an ERP with a smart user interface that allows you to make decisions with access to real-time knowledge from devices anywhere.

Design and implementation of Business Intelligence

We have an effective solution to help organizations in real time decision-making processes.

Business intelligence is a set of methods and theories that provide data and insights to business processes. In Ixaya we have the tools to help organizations to identify and develop the most important and representative inquiries from companies, to understand the behavior of their processes and the business opportunities they have.

Therefore, we develop complex data reports and analysis, implementing methods to do this in an organized and regular way that can be modified whenever you require it. Ixaya has certified personnel with extensive experience in this field, turning small companies into high performing organizations through information cube indicators such as QlickView®, Pentaho and other proprietary technology of our own.

Finally, also we satisfy the high command of organizations, developing comprehensive ERP publications and cube key indicators to graphical display views.

To achieve this, Ixaya has become a business partner, incorporating the best tool that exists nowadays in the market, called Roambi®, that runs over iOS platform and provides access to critical information in the hands of management people.

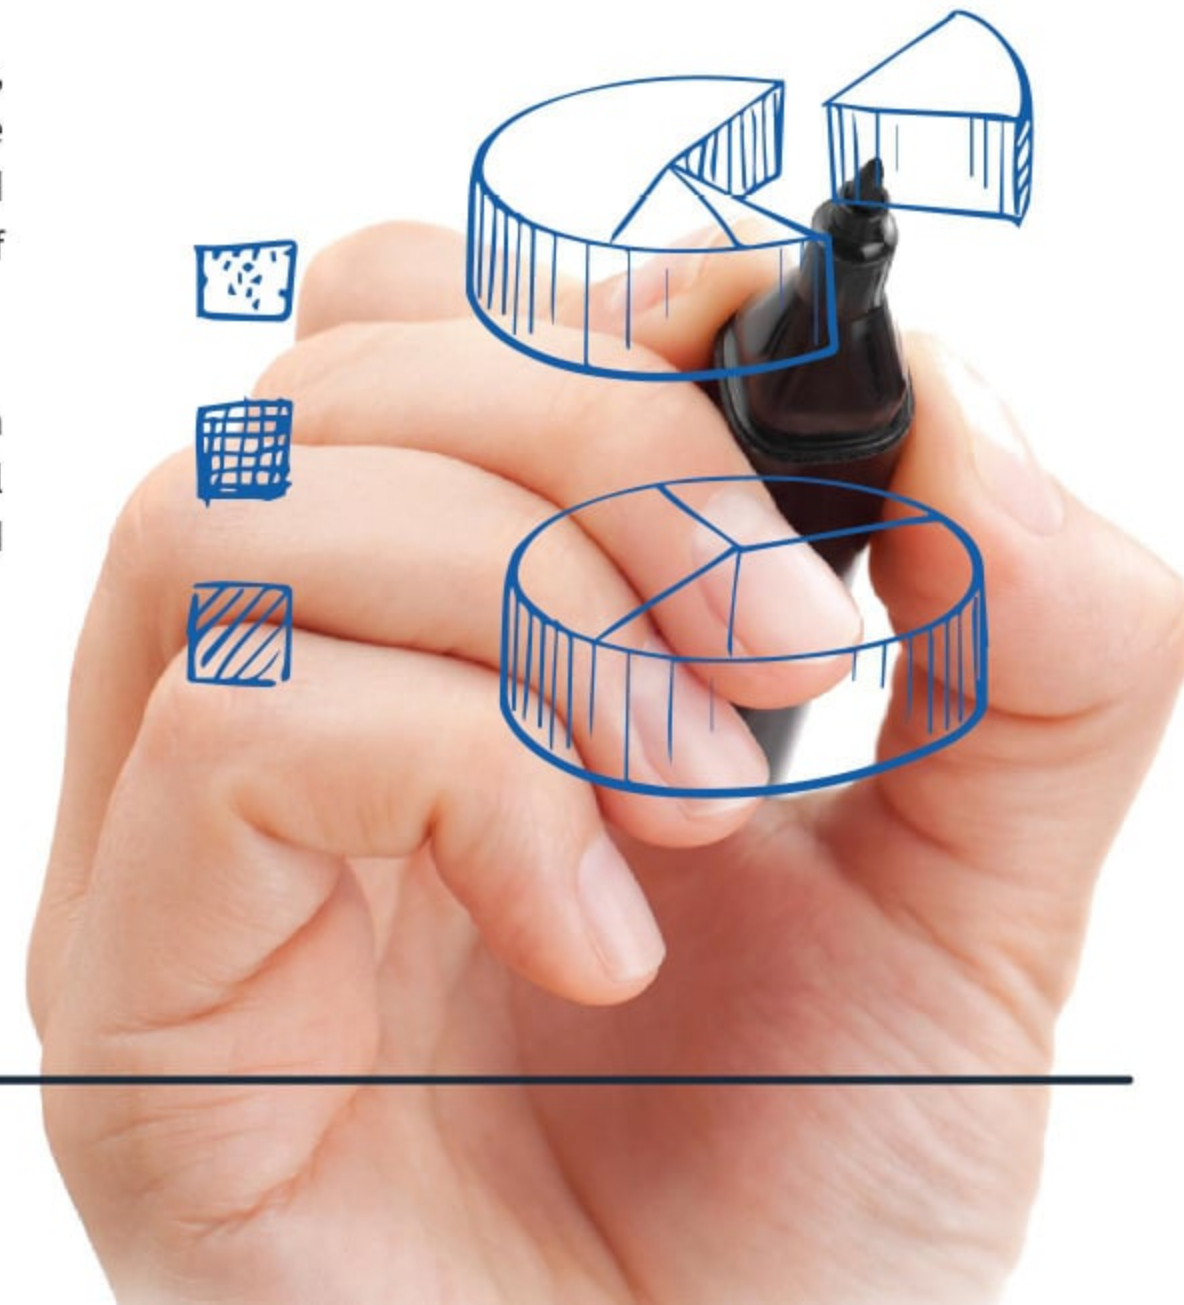

Ixaya assists the staff of organizations in the composition of graphics, or well, to design information flows. The goal is clear: to always know the information in a simple and intuitive way.

pentaho®

Powerful business intelligence tool that enables integration and data cubing in order to integrate reports, views and dashboards, for operational, managerial and executive levels.

Roambi®

Roambi® is a data visualization tool through KPIs (key performance indicators) such as costs, inventory, sales, operations, among others. Roambi also allows the publication of such views in digital magazines.

Hardware

We are suppliers of robust computing and printing equipment designed to assist the industries in the processes of data collection and traceability.

IXAYA NET

We offer access points of our own technology to help the installation and professional implementation of intelligent WiFi networks that are self-built and self-repaired, facilitating the integration of new access points.

Designed to operate in any environment, a mounting kit is included for indoors (desktop, ceiling and walls) or outdoors (open air, on walls, posts or various structures) installation.

Four SSIDs, captive portal, Facebook WiFi, user management capabilities, ad-hoc mapping, personal and business WPA, DHCP, NAT, VPN transit, 3x3 MIMO 802.11ac, 1300 mbps, SSID-VLAN tagging and many more features.

It is very easy to control and manage from small networks with few access points to large sites with thousands of locations, all from a single cloud-based control panel.

IBM

POWER8

IBM® POWER Systems offers servers with open technologies that are designed for essential applications. The world that does not wait requires servers designed for big data that are optimized, guaranteed and adapted for changing business demands.

OpenPOWER™

At Ixaya, we sell IBM® POWER8 equipment as well as **OpenPOWER™** certified hardware to meet all the data processing and storage needs our business and manufacturing customers need.

Honeywell

Thor VM1 & VM2 — Computer designed to be mounted on vehicles. Toughness for industrial applications. Reduces maintenance costs by integrating parts that are easy to replace by the user himself. It has advanced energy saving options.

Handheld — Combines the functionality of a mobile computer with barcode and RFID reader. Integrates RFID writing ability. Essential part for the processes of data collection and traceability in any industry.

ZEBRA

Zebra ZT410 — Printer designed for ease of use. LCD offers an intuitive graphical user interface and easy paper loading. It Includes USB, Serial, Ethernet and Bluetooth® connectivity ports. RFID expanded capacity.

Zebra ZQ510 — Optimized printer for printing on-demand tickets for the transport, logistics and government fields. It produces labels for a wide range of uses and applications. It withstands drops, bumps and extreme environmental conditions.

Success Stories

We appreciate the preference and support of those who have decided to work with us, that has allowed us to consolidate as one of the most important technology companies in Mexico.

SHOWA

Development of a data collection and traceability system for batch control in reception processes, transfers, finished product, shipping and inventory, with label printing to identify the product in its different processes. It integrates business intelligence that allows users to visualize financial and operational information.

森六 MORIROKU

The development of specialized weighing systems connected to its assembly line was made to streamline its production processes. Likewise, we developed a series of updates for the Japanese ERP that they use, in order to incorporate CFDI of payments and thus comply with Mexican regulations.

mazda

Our collaboration with Mazda de México was carried out by supplying specialized hardware equipment with the objective of supporting punctually in its automotive manufacturing industrial processes.

KASAI

For Kasai Mexicana, we serve as specialized hardware suppliers to support its internal auto parts manufacturing processes for internationally recognized Japanese brands.

serviacero comercial

For Serviacero, we have developed its own hardware in order to increase the security of the access control system to its facilities in a centralized manner, making the corresponding link to the Oracle systems currently used by the company.

PM STEELE

For PM Steele, we carried out the implementation of improvements and new functionalities in the mobile application that its sales agents use to support their work, allowing the user to position the furniture to be acquired on an interactive plan and thus facilitate the task of quotation.

Financial, Geographic and Real Estate Services

In 2008, we collaborated with Banorte to be pioneers in innovation by designing and developing the yoPago system, the first mobile payment application in the world, with which we can perform secure and effective banking, providing flexibility and security benefits to electronic business owners.

For Krypto, a platform has been developed to exchange digital assets (cryptocurrencies). It offers users availability in periods of high demand and the implementation of the best security standards. It provides the necessary tools to have a high level trading experience.

For The Coca-Cola Company, the business intelligence tool Roambi was integrated to obtain indicators and electronic boards, making possible the analysis of the performance of its bottlers groups and facilitating decision-making at the executive level.

With El Corte Inglés, a collaboration was made to consult the cadastral information of Mexico City. Likewise, work was carried out in connection with the banking entities that collect the property tax in that entity.

The development of a mobile application that allows the visualization and payment of the property tax before the Cadastre of Mexico City was carried out for Ovica, as well as the generation of appointments to go to the offices to perform procedures in person. Available on iOS and Android platforms.

For SomosMass99 we have taken care of the necessary infrastructure for its operation. In the same way, we have implemented security mechanisms to guarantee the stability of the site despite the constant computer attacks that they have experienced.

Integration of its current systems with a suite of business intelligence tools (Roambi and Pentaho), to convert information from different sources, such as its ERP and files, into interactive dashboards that optimize decision making through indicators.

An analysis and implementation of improvements to the existing infrastructure in El Bosque Country Club has been carried out continuously, paying special attention to its email servers and the computer security of its network, essential elements for its daily operations.

Implementation of Odoo ERP and development of its digital business platform for the generation of a web and mobile community on the iOs and Android platforms. Development of mobile application for information and quotation of offices, request for reservations of meeting rooms, as well as service orders for their tenants on iOS and Android platforms.
